#### 1. ТЕХНИЧЕСКИЕ ХАРАКТЕРИСТИКИ

#### 1.1 Постановка задачи на разработку программы

Разработать программу, в которой вахтер следит за тем, чтобы в картинной галерее было не более 50 посетителей. Для обозрения представлены 5 картин. Посетитель ходит от картины к картине, и если на картину любуются более чем десять посетителей, он стоит в стороне и ждет, пока число желающих увидеть картину не станет меньше. Посетитель может покинуть галерею. Создать многопоточное приложение, моделирующее работу картинной галереи.

#### 1.2 Описание алгоритма и функционирования программы

Согласно принципам ООП созданы классы Client, Wathman(вахтер), Gallery, Picture. При запуске создаются клиенты, к ним передается команда начать в новых потоках идти в галерею. Клиент получает доступ(ссылку) к галерее через вахтера, в котором встроенный семафор не позволяет пустить в галерею более, чем 50 клиентов. Каждый клиент далее определяется сколько картин он захочет посмотреть и в цикле каждый раз пытается рассмотреть случайную картину. Картина представляет из себя контейнер для семафора. Клиент использует этот семафор, чтобы подойти к картине, когда там достаточно много свободного места, после чего он рассматривает картину 1 секунду и переходит к следующей картине. После всех операций, пользователь покидает галерею.

#### 1.3 Формат входных данных

Входные данные отсутствуют

#### 1.4 Формат выходных данных

В консоль выводится каждое действие клиента в процессе посещения им галереи.

## СПИСОК ИСПОЛЬЗУЕМОЙ ЛИТЕРАТУРЫ
